Data is collected from various sources. DEP Data is downloaded quarterly and is the basis for all tracking of gas industry activity. In the period between the quarterly downloads, permits account for most of the new information collected. All available gas industry related sites are incorporated into a separate database maintained by the county in order to provide 911 addresses to all sites. The map to the left shows the static download from DEP in blue and the additional data that has been added since that download in yellow.
